## Satellite Accumulation Area Inspection Log

**Instructions:** Make copies of this form as needed. Inspect waste containers holding hazardous chemical wastes once a week for leaks, signs of corrosion, dents, bulging, swelling, and proper labeling. If a container is found to be leaking, immediately transfer the waste to a new container. Containers must be closed at all times except when adding or removing wastes. Waste containers must not be stored next to other containers holding incompatible chemicals (i.e., acids and bases, flammables and oxidizers, cyanides and acids, etc.) unless they are separated by a cabinet wall or have secondary containment. Any deficiencies you find must be corrected immediately and documented in writing. Document every inspection on this form and save every inspection log for at least three years.
